It is very predictable and dependable and can be fed into the power grid or stored. It is environmentally sound and non-polluting, with no exhaust gases, no noise and no visibility from the shore. It is scalable to high ca-pacity power stations of 100 megawatts or more. In fact, 100 square miles of ocean area off the coast of California, which is a very small fraction of the coastline, is estimated to be capable of producing all of Californias electrical power. Furthermore, wave energy has an availability factor of 90 per-cent compared to wind and solar availability factors of 20 - 30 per-cent. OPTs wave energy generation system is based on the rising and falling of the waves which cause the buoy-like structure to move freely up and down. The resulting mechanical stroking is used to drive the electrical generator, the power from which is then transmitted ashore. The OPT device is a proprietary, smart system that uses an on-board computer and sensors to effectively convert the random wave energy into electrical power. In addition, the OPT system includes sophisticated techniques for automatically dis-connecting the system in storm waves and then automatically re-connecting it when the waves return to normal operating condi-tions. The OPT power generation system has numerous environmental advantages. There is no fuel, there is complete absence of CO2 emissions, radiation and particulate matter pollution. There is no noise pollution, nor is there any...
