

A Phylogenetic Classification of Animals (For the Use of Students)

By William Abbott Herdman

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 24 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1885 Excerpt: . . . placed in the anterior portion of the foot, and opens ventrally. In most cases this region of the foot is drawn out radially into paired processes, which may be provided with suckers. The median part behind the head is developed into a pair of flaps (the epipodia), which may be used as swimming organs, or modified to form a posteriorly placed funnel. The remainder of the foot is undeveloped. A shell, if present, is light and fragile. Such an ancestral form as this is most nearly represented at the present day by the Pteropoda, a group which diverged far back, and probably have undergone comparatively little modification. Some of them are probably degenerate. The epipodia have remained in their primitive condition as large muscular flaps, and are used as swimming paddles. The other parts of the foot may remain in a rudimentary condition. The ctenidia have...
